## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 21-27 are allowed.

### ***Reasons for Allowance***

2. The following is an examiner's statement of reasons for allowance:
3. The closest prior art of record is U.S. Patent No. 6226618 to Downs et al.

Downs et al. disclose a secure container containing metadata and content, wherein at least a portion of the content is encrypted by a content provider using a private key and the metadata includes the private key. Also, Downs et al. disclose a buyer using the private key to decrypt the content. Downs et al. taken either individually or in combination with other prior art of record fails to teach or suggest separating said two part file into the encrypted content and the encrypted overhead at the buyer and decrypting the overhead by the transaction agency, using the public key to reveal the private key as recited in independent claim 21.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
  - "Securing the Content, Not the Wire, for Information Commerce" by Sibert et al. discusses a container's physical structure, which includes an encrypted header.

Art Unit: 3621

- US Publication No. 2004/0064688 to Jacobs discloses a method for processing packets with encrypted data received by a client from a server through at least one network wherein the data packets comprise at least an encryption header and payload, extracting the encryption header from a data packet, extracting and decrypting the encrypted payload to form a clear data, generating a clear data packet segment.
